## Cover Letter

To whom it may concern,

As a self-taught web developer, my journey showcases resilience and adaptability. With the constant need to find information on my journey, the skill of do-diligent research is essential. The path is not easy but it taught me many things, do not give up to the pressures of learning something new and all alone. I've found learning takes time and patience then the stress can become a fun challenge to overcome or something silly to laugh at later.

I've completed many relevant projects on my path to start my new career and I will complete many more. With all my projects I learn and comprehend the concepts then look to apply them to the project being built. It rarely goes how I in-vision so I'm constantly adapting, researching languages deeper as I delve into each project. HTML, CSS & JS are present in all my projects, currently learning Pug, Express & NodeJS building a full stack marketplace app.

I hope my letter finds you well. I would love to start my new career in software development and I'm confident I will prove an asset to your company. I respectfully send this application for review and request an interview to discuss how I could help you meet your goals.

Thank You,  
Jacob Warren
